

Flagship test: push the sycophancy direction back in. Does the behavior return?

Same extracted direction and prompt set. Each arm uses the layer selected in a 20-prompt discovery sweep. Arm 6 (IP) rises from 0% to 82%; arm 4 (CRT repair) reaches 24% at the same strength. Bands show 95% bootstrap intervals on 50 prompts.

Removing the direction from the sycophantic baseline (arm 1) has no effect in this sweep; it stays at 98%.
