

Behavioral echo of the mechanism: re-prompting reopens the IP gate, not the CRT repair

Re-eliciting with the inoculation instruction restores Strong IP (arm 6) from 12% to 99% sycophancy — the gate reopens.
CRT repair (arm 4) resists: it only reaches 5% (exact) / 37% (generic). Mirrors the causal steering result. Bars: 95% CI.
