

Flagship test: push the sycophancy direction back in — does the behavior return?

Same direction, same layer, same prompts — only the training differs. Arm 6 (IP) is fully restorable (0% to 82%): the behavior was gated, not gone. Arm 4 (CRT repair) caps at 24% even at 2x strength — the computation was overwritten. Bands: 95% bootstrap CI.

Removing the direction from the sycophantic baseline (arm 1) has no effect — it stays at 98%.
